

Fiber Optic Standards

Multimode Fiber Types

OM3 laser-optimised multimode fibre supports 10 Gbps to 300 metres and 40 Gbps to 100 metres using parallel optics. OM4 extends 40 Gbps to 150 metres and 100 Gbps to 100 metres. The minimum bend radius for OM4 is 30 mm under no-load conditions.

- OM3: 10 Gbps to 300 m
- OM4: 40 Gbps to 150 m, 100 Gbps to 100 m
- Bend radius: 30 mm (OM4, no load)

Single-Mode Fiber

OS2 single-mode fibre is specified for ITU-T G.652.D. Attenuation shall not exceed 0.4 dB/km at 1,310 nm and 0.3 dB/km at 1,550 nm. OS2 is the default choice for distances exceeding 550 metres.

Connector Polish

UPC polish returns -50 dB typical reflectance. APC polish returns -60 dB or better. APC is required for passive optical networks and any WDM application. Mixing APC and UPC connectors in the same link is prohibited.
