

Industry Standards Overview

TIA-568 Series

The TIA-568 series defines commercial building telecommunications cabling standards. TIA-568-C.2 specifies balanced twisted-pair cabling and components. TIA-568-C.3 covers optical fibre cabling components. TIA-568-D is the current revision, introducing Cat 8 and modular plug-terminated links.

- TIA-568-C.2: twisted-pair
- TIA-568-C.3: optical fibre
- TIA-568-D: current revision, includes Cat 8

BICSI Standards

BICSI publishes the Information Transport Systems (ITS) manuals. BICSI-007 covers data centre design and operations. BICSI-002 covers network design. BICSI-005 covers distributed antenna systems and in-building wireless.

- BICSI-007: data centre design
- BICSI-002: network design
- BICSI-005: distributed antenna systems

ISO/IEC 11801

ISO/IEC 11801 is the international counterpart to TIA-568. Class EA corresponds to Cat 6A, Class FA to Cat 7A, and Class I to Cat 8. The channel and permanent-link definitions align with TIA but use metric dimensions in diagrams.
